

Control your conference calls from your BlackBerry® smartphone

Ring2 eliminates everyday frustrations and security concerns familiar to frequent conference callers. Still dial into the conference from any phone and then take remote control of the call from your BlackBerry smartphone for improved visibility, security and control.

Access

- Invitations integrated with Outlook
- Join from any phone without needing an access code

Visibility

- Notification when call starts
- See who's on the call, and who's missing, at anytime

Security

- Drop unrecognized participants
- Positive confirmation when a participant leaves call
- Hold participants to music for private conversations

Control

- Mute participants with interfering background noise
- Add missing participants
- Record the call for retrieval as an MP3 file

Technical requirements

The BlackBerry application is deployed seamlessly to BlackBerry smartphones via your BlackBerry® Enterprise Server or the BlackBerry® Internet Service. Ring2 Conferencing is a fully-hosted service; you do not need to install any hardware or equipment.
